

Free-Standing Combi - Freezer Bottom

KSM4560N

FEATURES

- Metal håndtag
- Vin/flaske holder
- 35 dBA
- Højdejusterbare glashylder

Vin/flaske holder

Opbevaring af flasker til køling kan være pladskrævende og medføre risiko for, at flaskerne ikke ligger stabilt. En vinhylde er tilpasset flaskens form, så den holder sig stabil og med nem adgang. Hyliden fungerer også godt til sodavandsflasker eller andre flasker.

Metal håndtag

Blombergs køleprodukter er udstyret med brugervenlige og robuste metalhåndtag, der ikke kun gør det let at åbne døren, men også giver skabet et elegant udseende.

Stor Kapacitet

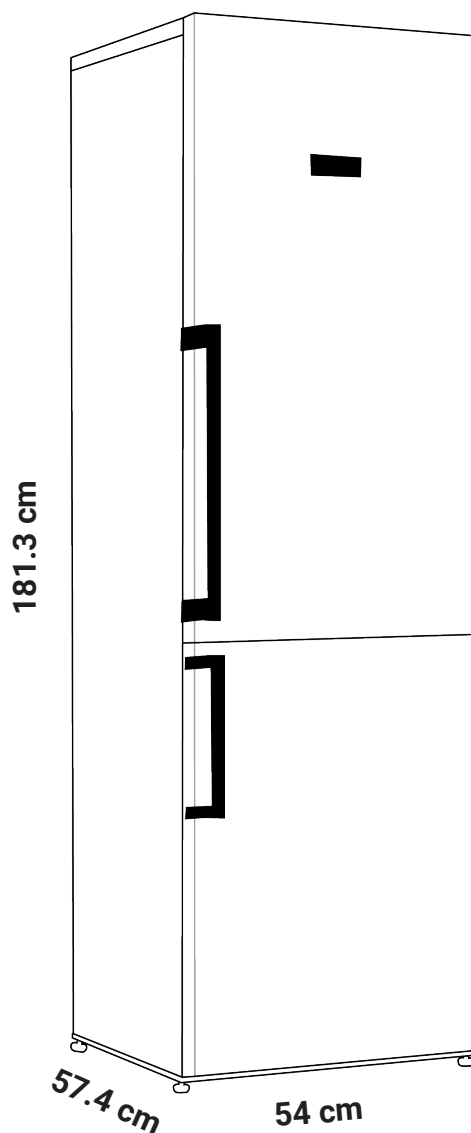

Til trods for at ydermålene er det samme på de fleste skabe, kan der være store forskelle på indretning samt hvor godt pladsen er udnyttet. At skabe mest mulig plads uden at gå på kompromis med isolering og dermed energiforbrug, er en kunst. Blombergs skabe designes altid med henblik på funktionalitet og optimal udnyttelse af pladsen så du kan opbevare flest mulige madvare.

GENERAL

Type	Free-Standing
Total Volum	291 liters
Capacity Fridge	204 liters
Capacity Freezer	87 liters
Color	White
Freezer Position	Freezer Bottom
Cooling System Type	Static
Control	Rotational Controller on Ceiling
Control System	Mechanic
Display	No
Display Type	No Display
Light	LED
Door Opening Direction	Right
Reversible Door	Yes
Open Door Alarm	No
Quick Cool	No
Quick Freeze	No
Eco Mode	No
Holiday Mode	No
VitaminZone	No
Dairy Compartment	No
Freezer Defense	No
Ice Maker Type	IceBox
Glas Shelves	Glass-All standard
Wine Rack Type	54 cm wine rack

PERFORMANCE AND TECHNICAL INFORMATION

Energy Efficiency Class	E
Noiselevel	35 dBA
Noiselevel Class	B
Climat Class	SN-ST
Dimensions (HxWxD)	181.3 x 54 x 57.4 cm
Plug Type	European
Cable Lenght	2.20 m
Daily Freezing Capacity	4.0 kilograms
Energy Consumption (kWh/annum)	227 kWh/annum
Refrigerant	R600a
Refrigerant Charge (kg)	0.066

- Do not place the refrigerator in a room where the temperature may fall below 10 degrees C at night and/or especially in winter as it is designed to be used in ambient temperatures between +10 and +38 degrees C. At lower temperatures, the refrigerator is unlikely to work and the storage time of the food in the cabinet will be reduced.
- Do not place the refrigerator near the stove or radiators or in direct sunlight as this will cause an additional load on the refrigerator. If it will be installed near a heat source or a freezer, keep the following minimum clearance:
 - From stove 30 mm
 - From radiator 300 mm
 - From freezer 25 mm
- Make sure there is enough space around the refrigerator so that air can circulate freely. Position the rear air cap towards the back of the fridge to find the correct distance between the fridge and the wall.
- The refrigerator must stand on a flat surface. The two front legs can be adjusted. To ensure that the refrigerator is vertical, adjust the two front legs clockwise or counterclockwise until they are in good contact with the floor. Correct adjustment of the legs prevents unnecessary vibration and noise.
